Advanced e-Financial Technologies, Inc. (AeFT) is a California corporation established since November 2000. The company's mission is to provide financial and technological innovation to better our lives by wealth creation and preservation through prudent risk management.

The American real estate market is currently the world's largest financial market. The total value is over 11 trillion dollars. However, as sophisticated as the US financial market is, the American homeowners up until now still can not hedge the equity value in their homes. Although the housing market has been very strong due to a very low mortgage rate in the last few years real estate prices at some point in the near future may start to decline. When that happens the homeowners/investors will have no other way to protect the erosion of their asset value other than selling it outright.

AeFT is focused on the creation of the world's first on-line exchange for real estate futures. The [REIF \(Real Estate Index Futures\) Exchange](#) will facilitate the buying and selling of futures contracts by both homeowners and institutional traders based on real estate valuation per square foot for each zip code area throughout the United States. This new market will enable homeowners and others deeply concerned with real estate valuations to protect their investments.

[AeFT's team](#), which possesses the best knowledge and expertise from the amalgamation of seasoned professionals in financial, real estate and IT industries, is dedicated to provide our customers with the ultimate financial services satisfaction with the highest integrity.
