### *Press Release*

**(1 June 1998)**

***ATMS Awarded Innovation Development Scheme, NSTB***

The redevelopment of Advanced Treasury Management System (ATMS) into Oracle 8.0 platform was funded by the Innovation Development Scheme under the National Science and Technology Board, Government of Singapore. ARMS is honoured to receive this grant in recognition of the product innovation and leading methodologies used for the development of ATMS.

The ATMS is a leading edge system developed on Oracle 8.0 to take advantage of the technological superiority in database management and internet connectivity. Incorporating ARMS' intense research and development in the areas of risk management financial engineering, this system is the first effort to place all I.T. requirements in the treasury under one platform. The system will provide all functions ranging from transactions processing (deals capturing, limits setting, positions monitoring, settlements, sending information, accounting etc) to financial analysis (pricing, hedging, scenario analysis, portfolio duration, Greek measurements, gaps reporting etc) to enterprise-wide risk management (according to the Value-at-Risk methodology) under a single database platform.

***For more information about ATMS, please contact***
